Microassist Digital Accessibility and Elearning Consulting Services

For over three decades, Microassist has delivered accessibility audit and remediation services, document remediation, custom training, digital learning, and consulting services to corporate, education, government, not-for-profit clients.

Microassist Audit

We audit digital assets and provide actionable audit reports. You will know what is not in compliance and receive guidance as to how to make your digital assets accessible.

Microassist Remediation

Your organization may not always have the in-house bandwidth or expertise to remediate your assets on a compressed timetable. We have a team of accessibility experts that can work with you side by side or remediate outright – or craft a blended approach suited for your organization's mission.

Microassist Training

Digital assets may only remain accessible until they are altered again – by a content creator or even a system generated update. Trained professionals who incorporate accessibility into everyday tasks help maintain your accessibility and mitigate the risk of becoming non-compliant with future updates.

Microassist Procurement / Voluntary Product Accessibility Template (VPAT) Services

Organizations often require VPATs when working with third-party vendors. However, a question we often hear is, "How do I know this VPAT is accurate?" Microassist works with purchasing and other departments to understand and evaluate the supplier's VPAT ("trust but verify").
